

A strict rule without flexibility makes competition and product development hard to come by. The signal signature of a system is very dependent on the dB levels. FCC should not decertify a system when there is a modification on cable run or hardware modification.

Since the current part-15 rule looks like unenforceable, it has hard to imagine that WISP operator abiding by the rule. FCC should allow minor dB loss on a system, there is no way unqualified person could do this kind of job.

There is an area where FCC could be a bit more enforcer, to check and find a way to get rid off wireless system which is disrupting the communication of licensed spectrum. WISP should be compliance with the rules. This would protect the ruler Americans being exploited by quick money makers.

HP is very right the current importation is too restrictive, and unhealthy for new product development and competition. By having more products to display on trade show, the customer would decide what is good for the business.
